

STEELE STORAGE SYSTEMS

ESTABLISHED 1985

PRODUCT CATALOGUE

Shelving | Racking | Mobile Shelving | Mezzanine Floors

Established in 1985, Steele Storage Systems is a family-run business. We remain small and versatile, with the aim of keeping overheads low and delivering professional, efficient service.

With over 40 years in the industry, we have become one of the leading suppliers and installers of an extensive range of shelving systems in the country. Our range includes shelving, racking, mobile shelving and bulk filing systems to suit large-scale warehousing or small private storage spaces.

Our main operations are run from Cape Town, but our services extend to other South African centres. We also export shelving and racking components to African countries.

Free CAD design service | Free site visits and assessments within the Cape Town area

Our Main Offering

Supply, install and export

An extensive range of shelving and racking, supplied, installed and exported.

In-store viewing

Instore shelving available for viewing and purchase in Cape Town.

Free design service

Computer Aided Design (CAD) used to illustrate the best shelving and racking design and layout for your space.

Free site visits

Free site visits and assessments within the Cape Town area.

Our Products

As a small, family-run business we remain versatile and adaptable, offering shelving and racking solutions from large-scale warehousing to small private storage spaces. Our range can be used in corporate offices, warehouses, industrial parks, manufacturing sites, archives, libraries, storerooms, garages, laundrettes, medical suppliers, retail stores and many other storage areas.

Angle upright / steel bolted shelving

Economical, adjustable, self-assembled

Angle Upright or Steel Bolt Shelving

Angle Upright / Bolted Steel Shelving

- Economical solution
- Adjustable shelves and number of bays
- Self-assembled
- Durable and strong
- High quality steel
- Scratch-resistant powder coat
- For day-to-day storage

Angle upright (bolted steel) shelving is the most widely used and common storage system available, mainly because it offers an economical and durable solution to your storage requirements. It is a bolt-together system that can be self-assembled.

The shelves and uprights are made from high quality steel. Our uprights are manufactured from 1.6 mm material and our shelves from 0.8 mm steel, which can carry distributed loads of up to 160 kg per shelf (depending on the size of the shelf). Units are available in a scratch-resistant powder-coated or pre-galvanised finish.

Available sizes (mm)

Height	Depth	Width
1829 mm	305 mm	914 mm
2134 mm	381 mm	
2438 mm	457 mm	
2743 mm	610 mm	
3048 mm		

Shelving application

Shelves can be adjusted to cater for large or small storage items, so the number of shelves in each unit can be changed to maximise storage functionality. Units can also be fitted with solid backs and sides to create divisions between shelving units, and can be made strong enough to support a mezzanine floor.

Well suited to, but not limited to:

Archive storage • Office filing • Industrial parts • Cold room shelving • Stationery • Shelving for boxes • Garage shelving • Book shelving • Library shelving • Computer rooms • Schools • Medical facilities • Laboratories

Office Shelving

Office shelving is an ideal and cost-effective solution for the storage of documents and files. The shelving is made up of solid side panels, with each shelf clipped into place.

The shelves and uprights are made from high quality steel and are available in a scratch-resistant powder-coated finish. Exposed sides can also be clad in a decorative panel to suit any modern office or work environment.

Office Steel Shelving

- Economical solution
- Adjustable shelves and number of bays
- Durable and strong
- High quality steel
- Scratch-resistant powder coat
- For day-to-day storage
- For large-scale storage

Available sizes (mm)

Height	Depth	Width
1900 mm 2200 mm	305 mm 381 mm 457 mm 610 mm	914 mm

Shelving application

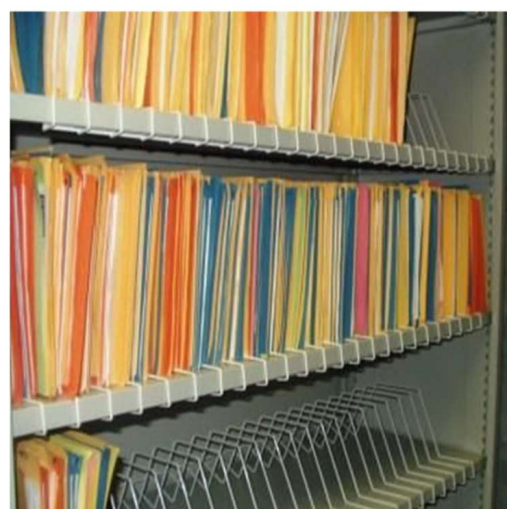

These free-standing units are an ideal solution for storing:

Files • Archive boxes • Stationery • Medical supplies • School supplies • Shop stores • Pharmacies

Units can also be mounted onto mobile bases to create a cost-effective mobile storage solution.

Office shelving with racks

Wire racks are an essential addition to your office filing system. They support loose cover files and retain the storage slot when a file is removed.

Mobile Shelving or Bulk Filing Systems

Mobile or Bulk Filing Steel Shelving

- High-density storage solution
- Economical
- Adjustable shelves and number of bays
- Easy access to filing
- Durable and strong
- High quality steel
- Scratch-resistant powder coat
- Lock system

This type of shelving is an economical and practical solution for high-density storage needs and small spaces. The shelving units move on a levelled rail, making the units easy to move and the files easy to access.

Units can also be clad with decorative melamine panels, designed to best match your existing office décor.

Available sizes (mm)

Height	Depth	Width
1900 mm 2200 mm	305 mm 381 mm 457 mm 610 mm	914 mm

Shelving application

Mobile shelving and bulk filing systems offer an ideal solution for:

Files • Archive boxes • Tape, video and media storage • Shop storerooms • Offsite storage • Medical rooms • Small parts storage • Compartment storage of stationery and small items

Ultra-Light Duty Racking or Long-Span Shelving

Light Duty Racking / Long-Span Shelving

- Small parts storage
- Bulkier hand-picked items
- Cold room storage
- Archive boxes
- Nurseries / plant storage
- Available in timber or steel decks
- Fully adjustable
- Strong and sturdy
- Up to 800 kg per shelf

UL racking provides long-span shelf space that is ideal for bulkier items, small parts storage or stock that needs to be hand-picked. This *Mini-Rack* system clips together, making it easy to dismantle, reconfigure or add to. Levels are fully adjustable and the beams can support loads of up to 800 kg per tier.

Units are usually supplied with either timber or steel decks. The racking frame is manufactured from high quality steel, making the system sturdy and robust. Timber decks are made from 25 mm timber, with the slats joined using a tongue-and-groove join, which improves the load-carrying capacity of the deck. Steel decks are available galvanised or powder-coated.

Available sizes (mm)

Height	Depth	Beam length
900 mm	300 mm	900 mm
1200 mm	450 mm	1200 mm
1500 mm	600 mm	1500 mm
1800 mm	750 mm	1800 mm
2100 mm	900 mm	2100 mm
2400 mm	1050 mm	2400 mm
2700 mm	1200 mm	2700 mm
3000 mm		

Shelving application

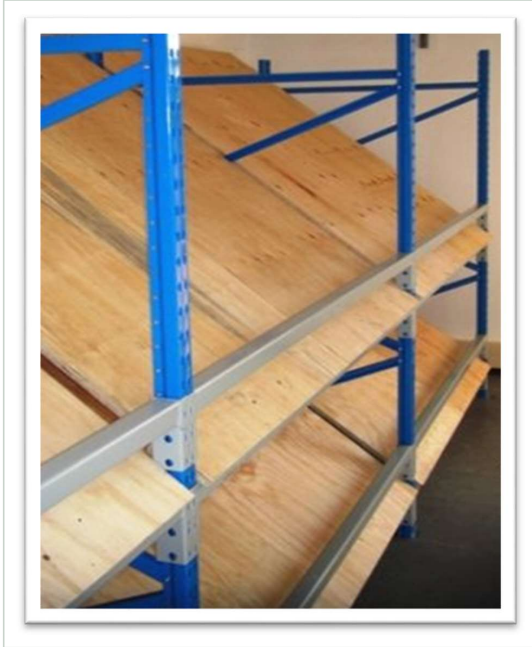

Ideally suited to storeroom and warehouse racking. Timber decks suit bulkier items and small parts that are hand-picked, while steel decks are great for cold room storage of food and perishable items. Other ideal uses include:

Small parts storage • Garages • Vets • Pet stores • Cold storage • Food storage • Perishable items • Nurseries • Restaurant fridge storage • Archive boxes • Industrial chemicals and materials • Tape, video and media storage • Shop storeroom • Offsite storage

Display Racking and Work Benches

Display racking

Light duty racking can be used to display stored items simply by changing the angle of the decks. This long-span shelving increases the accessibility and display of your stored items.

Ideal for storing: rolls of fabric, carpets, tiles, rolls of vinyl, wallpaper, scrolls, flat ceramics and picture frames.

Work benches and packing tables

Lower units of the light duty racking make a very cost-effective work bench or packing table. The work surface is ideal for creating independent workstations in an industrial space, or packing tables for service industries. Units can be made with either timber or steel surfaces; steel decks are a good solution for sterile environments.

Available sizes (mm)

Height	Depth	Beam length
900 mm	300 mm	900 mm
1200 mm	450 mm	1200 mm
1500 mm	600 mm	1500 mm
1800 mm	750 mm	1800 mm
2100 mm	900 mm	2100 mm
2400 mm	1050 mm	2400 mm
2700 mm	1200 mm	2700 mm
3000 mm		

Heavy Duty or Warehouse Pallet Racking

Heavy Duty / Warehouse Pallet Racking

- Ideal for pallet storage
- Distributes loads on a 4-way entry pallet
- Fully adjustable
- Fully transferrable
- Wide range of load-carrying capacities
- Strong and sturdy
- Up to 11 m in height
- Available with timber or steel decks

Heavy duty (warehouse) pallet racking is the most common and widely used racking system in South Africa and is ideally suited to the storage of pallets. It is adjustable and available in many configurations for various load-carrying capacities. The racking clips together, so it can be installed in different configurations and easily transferred if you move premises.

It is ideal for pallet storage because it allows forklift access to all your pallets on every level. Timber or steel decks can also be mounted onto smaller units, making the system ideal for workshops and the storage of heavier items.

Manufactured from high quality steel, this racking normally has blue or green frames, with orange beams so they are easily identified by a forklift driver. Timber or steel decks are available; timber decks also help distribute the load where 4-way pallets are used. Warehouse racking is available in a scratch-resistant, powder-coated finish.

Specification summary

Frame height	Up to 11 m
Beam lengths	Different lengths available to maximise pallet storage, depending on the size and type of pallet in use
Load capacity	Wide range; configurations made to suit your required load-carrying capacity
Decks	Timber or steel
Frame / beam colours	Blue or green frames, orange beams
Finish	Scratch-resistant powder coat

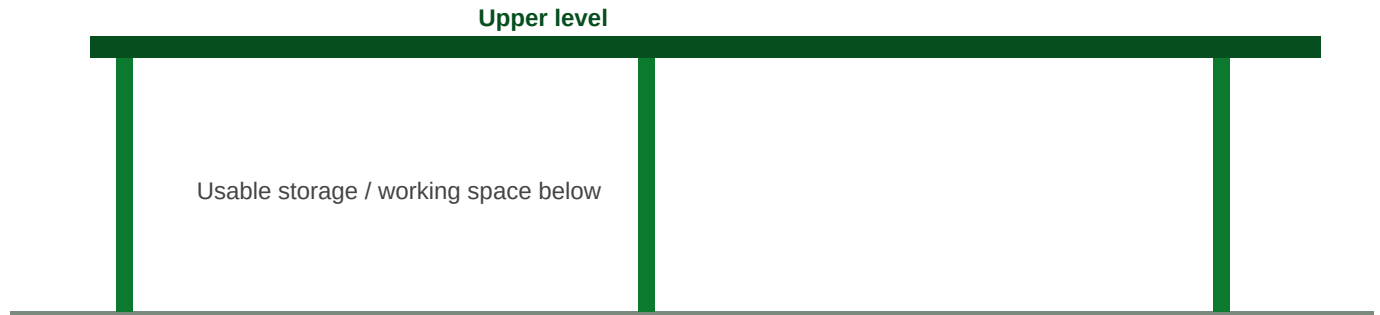

Shelving application

Ideal for: warehouse racking, pallet storage racking and heavy duty items.

Mezzanine Floors

A mezzanine floor adds a whole new level to your premises, adding usable space without the cost and disruption of moving or extending. The area underneath stays fully usable for storage, production or office space, while the new level above gives you room for shelving, racking, packing or additional work areas.

Mezzanine floors suit corporate office spaces, warehouses, industrial parks, manufacturing sites, archives, libraries, storerooms, garages, retail stores and many other storage areas. They can be combined with our shelving and racking systems, and our bolted steel shelving can be made strong enough to support a mezzanine floor.

How it works

From concept to completion

- Free site visit and assessment within the Cape Town area
- CAD design and layout drawings showing the best solution for your space
- Supply and installation of shelving, racking and mezzanine floors
- Mezzanine floors designed to work together with our shelving and racking

Contact us to discuss your requirements and to arrange a free site visit and design.

Get in Touch

Not sure which system suits your space? Our free design service uses Computer Aided Design (CAD) to illustrate the best shelving and racking layout for your needs, and we offer free site visits and assessments within the Cape Town area.
